The Amada press brake safety
Illustrations below are a good
visual guideline for the safe
operation of Promecam Machines
Use pliers or any other tooling to
help bend small dimension or
small width parts. Never place
your fingers near the punches.

The Operateur is a CNC control that was totally developed by Amada - Promecam. It controls all aspects of the HFB press brake yet it is simple to use and it is aesthetically and ergonomically designed. This control includes an integrated maintenance program that can be accessed from the PC through a DNC cable.

Amada Promecam Hydraulic Press
Brake Control troubleshooting
For downstroking Press brakes,
AMADA PROMECAM has retained
the principle of constant
parallelism, by using a composite
beam, which has been patented
in 20 countries. The mastery of
deflection is of greater
consequence to precision
bending, as without it, electronic
and hydraulic monitoring on press
brakes cannot be claimed as
being effective.

AMADA's Fixed Height (AFH)
press brake tooling reduces setup
time, limits clamp interference
and creates precise bend angles.
AFH tooling utilizes punch profiles
that are taller and narrower
providing a larger part bending
area. Multiple punch and die
profiles have a common height,
making brake setup fast and
stage bending easy.
