The specification ASTM A123/A123M covers individual steel pieces as well as assemblies of various classes of material. The six material categories covered in ASTM A123/A123M include structural shapes, strip and bar, plate, pipe and tubing, wire, and reinforcing bar. A fabrication can have more than one material category such as a frame assembly.

As the industry standard, ASTM A123 Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products, provides requirements for hot-dip galvanized coatings on various steel products. Most galvanizers located in North America use this specification as their standard for coating thickness, appearance, finish, and adherence.

Differences Between ASTM A123 and... | American Galvanizers ...

During the actual galvanizing step of the process, the material is completely immersed in a bath of molten zinc. The bath chemistry is specified by ASTM A123 and requires at least 98% pure zinc by weight maintained at a temperature above the melting point of zinc. The zinc metal in the bath must meet the requirements of ASTM B6 or ASTM B960.

Hot-Dip Galvanizing to ASTM A123 Fact Sheet

ASTM has balloted a few changes to ASTM A123 to add some clarity to the repair requirements, to specifically address the acceptance of skimmings in final inspection, and to reference the specification for continuous galvanized rebar in the scope section.
