Ap Biology Lab Answers A cladogram is a hypothesis about the evolutionary relationships between the organisms depicted on the tree. In this way, a cladogram illustrates the lines of descent for these organisms. A cladogram proposes an answer to the question " Which groups of organisms share a common ancestry? "

Biology Lab Cladogram Answers

Root – The initial ancestor common to all organisms within the cladogram (incoming line shows it originates from a larger clade) Nodes – Each node corresponds to a common ancestor that speciated to give rise to two (or more) daughter taxa Outgroup – The most distantly related species in the cladogram. Functions as a point of comparison.

Unit 1-2: Cladistics—The Biology Classroom

cladogram, in this sense, is its length—the number of character state changes on the tree. Count the number of tick marks: the first and second trees have eight character state changes, including two cases of convergence. The third tree, however, has only seven changes, including only one case of convergence. We say it ' s the shortest tree. A cladist

LABORATORY EXERCISE 6: CLADISTICS I | ungfish frog ...

Note: this cladogram was created for simplicity and understanding, it does not represent the established phylogeny for insects and their relatives. 1. ___ F ___ Wings. 2. ___ C ___ 6 Legs. 3. ___ A ___ Segmented Body. 4. ___ G ___ Double set of wings.

Cladogram—The Biology Corner

According to your cladogram, which two species are more closely related (circle your answer): perch and lizard OR hagfish and lizard Cite evidence to support your answer: ___ There are only 2 derived character differences between perch and lizard and there are 3 between hagfish and lizard. 4.

CLADOGRAM ANALYSIS LAB KEY 2015-CF

Chimpanzees and humans share 96% of their DNA which would place them closely on a cladogram. Humans and fruit flies are placed farther apart on a cladogram since they share only approximately 60% of their DNA. In the space provided, draw a cladogram that shows the evolutionary relationship between humans, chimpanzees, and fruit flies. According to the cladogram, the chimpanzees are more closely related to humans compared to the fruit flies because they share more characteristics with them ...

Cladogram Assignment Answers

Students are given a description and an example of a cladogram showing the relationship between lizards, snakes, crocodiles, and birds. They are then walked through the process of creating a cladogram for five animal examples: frog, fish, bird, koala, and lizard. The process involves suggesting traits that these animals share and finding traits that are unique to determine outgroups.
