For example, there might be a question about choosing the routing method in a network, and you need to know where and when to use static instead of dynamic routing. First, you need to classify dynamic routing protocols as interior and exterior. Although BGP is mentioned in the CCNA study, the main emphasis is on the interior protocols.

rating of the trustworthiness of a routing information source. Administrative distance is often expressed as a numerical value between 0 and 255. The higher the value, the lower the trustworthiness rating. If a router has multiple routing protocols in its routing table, it will select the route with the lowest administrative distance.
