Dental Caries Causes. Dental caries can be found in two different areas of the teeth, namely occlusal caries and interproximal caries. Occlusal caries, which develop on the topmost part of the teeth where the particles of food repeatedly come in direct contact with the teeth. Interproximal caries is formed between the teeth.

Dental Caries- Causes, Symptoms, Types and Treatment

Dental Caries Causes. Dental caries (tooth decay) is a multifactorial process that is caused by several factors. These factors are: Bacteria: they decompose carbohydrates and produce acidic metabolites that attack tooth enamel. Carbohydrate: it provides the basis of life for bacteria. Poor oral hygiene: lack of dental care promotes bacterial growth, proliferation and the formation of plaque.

Dental Caries: Causes, Progression, & Treatment [Pictures]

What Causes Dental Caries? Typically, dental caries can be spotted on two specific areas of the teeth: occlusal caries, which form on the top most part of the tooth where food particles repeatedly come in direct contact with the teeth and interproximal caries, which are dental caries that form between the teeth.
