Free radical mechanisms have been implicated in the pathology of several human diseases, including cancer, atherosclerosis, malaria, and rheumatoid arthritis and neurodegenerative diseases. For example, the superoxide radical ($O_2^{\cdot-}$) and hydrogen peroxide (H_2O_2) are known to be generated in the brain and nervous system in vivo, and several areas of the human brain are rich in iron, which ...

Free Radicals and Oxidative Stress: R&D Systems

Oxidative stress is the result of an imbalance between the intracellular production of free radicals and the cellular defense mechanisms. The balance between oxidants and antioxidants can be disrupted by an increase in free radicals or a reduction of anti-oxidative substances.
