A partial differential equation of order one in its most general form is an equation of the form.  $F(x, u, u_1, \dots, u_n) = 0$  where the unknown is the function  $u(x_1, \dots, x_n)$  of  $n$  real variables. Here, we will not consider problems of such generality but will focus instead on a smaller class of problems.

## Handbook of first order partial differential equations ...

A partial differential equation (or briefly a PDE) is a mathematical equation that involves two or more independent variables, an unknown function (dependent on those variables), and partial derivatives of the unknown function with respect to the independent variables. The order of a partial differential equation is the order of the highest derivative involved.
