High-Field MRI. Magnetic Resonance Imaging (MRI) is a medical imaging technique that uses a magnetic field and computer-generated radio waves to create detailed images of the organs and tissues in your body. Most MRI machines are large, tube-shaped magnets. When you lie inside an MRI machine, the magnetic field temporarily realigns water molecules in your body.

High-Field MRI - High Tech  
A low-field MRI system equipped with contemporary imaging technology allows users to see the lungs very clearly and can use inhaled oxygen as a contrast agent. Researchers modified a commercial MRI system with a magnetic field strength of 1.5T to operate at 0.55T while maintaining the modern hardware and software needed for high-quality images.
