The areal studies of Filimonov, continued into the cortical mechanisms by Polyakov, and functional analysis of the human cerebral cortex by Luria and his many fellow travelers, have volleyed corticology beyond its position in the western world (but they have neglected the important experimentation on higher primates).

~~Higher cortical functions in man. (Book, 1966) [WorldCat.org]~~

Higher Cortical Functions in Man. By A. R. Luria. I'm not actually going to review this entire book—the version I read, the 1966 Basic Books version, is massive—but I do want to touch on the framing. The book is based on Luria's neuropsychological work from the 1930s to the time of writing, and it was a landmark book for the neurosciences, exploding the myth that higher mental functions were associated with specific parts of the brain (the reading center, the writing center, etc.).

~~Spinuzzi: Reading :: Higher Cortical Functions in Man~~  
The commitment of cerebral cortex to a specific higher cortical function within the right hemisphere is less precise than in the left hemisphere. Luria (1973, p. 164) stated that the “functional organization of the nondominant right hemisphere is much less differentiated than that of the dominant left hemisphere.” In the left hemisphere, the areas of damage that produce alexia, agraphia, and Wernicke's aphasia are well circumscribed.

~~Higher Cortical Functions in Man, 2nd Edition: Luria ...~~

He made an in-depth analysis of the functioning of various brain regions and integrative processes of the brain in general. Luria's magnum opus, Higher Cortical Functions in Man (1962), is a much-used psychological textbook which has been translated into many languages and which he supplemented with The Working Brain in 1973.
