The new VXI-4 standard adds VME64x and VXS technology to the VXI architecture. VXI crates/mainframes and modules come in 2 form factors - C-size (6U x 340mm) or D-size (9U x 340mm). VXI uses the full 32-bit VME architecture, but adds lines for instrumentation signals to the outer P2 connector rows (VME: user defined) and to the P3 connector of the D-size backplane.

VME Modules. VME is a high speed and high performance bus system with powerful interrupt management and multiprocessor capability. It was created by combining VERSA-bus electrical specifications (1979) with the Euro-card format resulting in the VME-bus Revision A - 1981 specification. The VME-bus specification has since then been refined through revisions B (1982), C, C.1, IEC 821 & IEC297 and IEEE 1014-1987 as well upgraded to VME64x and VXS in later years.
