A mistake often made with operator displays is to limit the scope of the design work to mimic the process equipment shown on P&IDs and Process Flow Diagrams (PFDs). These initial displays include measurements, valves and final control elements. They include enough of the process equipment and piping so that the process flow can be ...

In general, the concept of design space and the appropriate process control should lead to more flexible, and ideally cheaper, manufacturing processes over time. This can be achieved through process improvements and real-time quality control, eventually leading to a reduction of end-product release testing.
