Variables  
Products of random  
variables - Internet  
Archive: Digital ...

Two variables  $X$  and  $Y$   
are said to be  
independent if  $P(X = x$   
and  $Y = y) = P(X =$   
 $x)P(Y = y)$  for all  $x$  and  
 $y$ . That is, the joint  
probabilities equal the  
product of marginal  
probabilities. This is  
similar to the definition

# Read Online Products Of

of independent events.

In the houses-sold example, we have  $P(X = 0 \text{ and } Y = 2) = 0.07$ ,  $P(X = 0) = 0.4$ , and  $P(Y = 2) = 0.1$ .

covariance is a measure of the joint variability of two random variables. If the greater values of one variable mainly correspond with the greater values of the other variable, and the same holds for the lesser values, (i.e., the variables tend to show similar behavior), the covariance is positive.

In the opposite case,
