Concrete's tension resistant capacity is so low that it only can be used in compression member. Steel, on the other hand, extremely strong in tension. So steel and concrete combination is ideal where we need both tension and compression-resisting member. Such combinations of steel and concrete are called reinforced cement concrete.

#### Reinforced Cement Concrete – An Overview - A Civil Engineer

Reinforced concrete is a combination of concrete and steel wherein the steel reinforcement provides the tensile strength lacking in the concrete. Steel reinforcing is also capable of resisting compression forces and is used in columns as well as in other situations. RCC IES MASTER GATE MATERIAL : CLICK HERE
