Serious games are cheaper technology than for example, an expensive simulator. An often-used digital technology in serious games is VR (virtual reality). With VR, a specific step of a medical treatment can become more effective by immersing patients into that experience. This leads to better outcomes for the patient. Scientifically validated

Section 3 investigates recent advances and key concepts in games technology, including dynamic simulation, flow theory, adaptive games, and their possible implementation in serious games for healthcare. Various serious games are described in this section: some were designed and developed for specific healthcare purposes, e.g. BreakAway (2009)'s Free Dive, HopeLab (2006)'s Re-Mission, and Ma et al. (2007)'s VR game series, others were utilising off-the-shelf games such as Nintendo Wii ...
