Shapes Of The Continents To Cut Out

The 7 continents of the world are North America, South America, Antarctica, Europe, Asia, Africa, and Australia. The 5 oceans of the world are the Atlantic Ocean, the Indian Ocean, the Pacific Ocean, the Southern Ocean, and the Arctic Ocean.. One of the most fascinating scientific topics is the study of the 5 oceans and 7 continents. The reason for this is that, even though most of us study ...

7 Continents And 5 Oceans | Science Trends

The continents once all fit together in one great continent called Pangeia. Geologists can identify by stone layers on the coastlines where they fit together. In addition, you can roughly see the similarity of shapes where they once fit, for example the coasts of Africa and south America once were together.

What do the shapes of the continents now tell us about ...

Among the many hypotheses that have been offered as explanation are: (1) the tetrahedral (four-faced) theory, in which a cooling earth assumes the shape of a tetrahedron by spherical collapse; (2) the accretion theory, in which younger rocks attached to older shield areas became buckled to form the landforms; (3) the continental-drift theory, in which an ancient floating continent drifted apart; and (4) the convection-current theory, in which convection currents in the Earth's interior ...

continent | Definition, Map, & Facts | Britannica

A continent is one of several very large landmasses. Generally identified by convention rather than any strict criteria, up to seven regions are commonly regarded as continents. Ordered from largest in area to smallest, these seven regions are: Asia, Africa, North America, South America, Antarctica, Europe, and Australia. Variations with fewer continents may merge some of these, for example ...

The presents shapes of the continents fit perfectly into one super-continent, actually. If we look carefully and examine each edge of the various continents you will see where they fit. It may not be "perfect" as imagined but it is almost a perfect fit. There are various reasons why they do not align as perfectly as we want it to be.

4. Why don't the present shapes of the continents fit ...

Europe is the world's third most populated continent, and the sixth largest continent by land area. Although physically connected to Asia, Europe has historically been considered a separate continent due to cultural and linguistic differences. The Ural and Caucasus Mountains are generally thought to be the eastern boundary of Europe.
