Principles of foundation design The main role of foundations is to structurally support the building by transferring the loads of the building through the walls into the surrounding soil. In terms of a stick frame structure, the foundations must also protect the timber from moisture ingress by lifting the members above the ground.

(PDF) Simplified Design Procedure for Piled Raft Foundations

Raft Foundations, also called Mat Foundations, are most often used when basements are to be constructed. In a raft, the entire basement floor slab acts as the foundation; the weight of the building is spread evenly over the entire footprint of the building. It is called a raft because the building is like a vessel that 'floats' in a sea of soil.
