Details - The green Algae of North America - Biodiversity ...

The conjugating green algae (Zygnemotophyceae) are among the most widespread and commonly encountered green algae in freshwaters of North America. Common in the benthos and plankton in ponds, streams, and ephemeral streams and Sphagnum bogs and in some subaerial habitats, conjugating green algae occur in diverse epiphytic assemblages on mosses and aquatic plants.

Green Alga - an overview | ScienceDirect Topics

Cellular structure. Green algae have chloroplasts that contain chlorophyll a and b, giving them a bright green color, as well as the accessory pigments beta carotene (red-orange) and xanthophylls (yellow) in stacked thylakoids. The cell walls of green algae usually contain cellulose, and they store carbohydrate in the form of starch.. All green algae have mitochondria with flat cristae.

The green Algae of North America: (second supplement ...

The yellow-green algae are quite diverse in freshwater habitats of North America: At least 90 genera have been reported. The widespread coenocyte genus *Vaucheria* can form dense mats in streams when nitrogen and phosphorus concentrations exceed a threshold level (Stevenson et al., 2007), but they also are common on moist soils.
