Ultrasound Guided Regional Anesthesia — Ultrasound Experts

Description There are a number of conditions for which regional anaesthesia to allow surgery is required for a specific part of the body. This technique aims to provide accurate placement of local anaesthetic by using ultrasound guidance to position needles that deliver the local anaesthetic in the correct place next to the nerves.

Finally, the ability of ultrasound-guided regional anesthesia to become the “ holy grail ” of regional anesthesia—providing neural blockade with rapid onset, long duration, and improved success, without complications—has recently been discussed.¹³ Although many advocates of ultrasound theorize that direct visualization of neural targets and needle advancement may decrease the frequency (and severity) of neurologic injury, preliminary results do not support the hypothesis that ultrasound ...
