Orthogonal coordinate systems exist in any Euclidean space, but, generally speaking, do not exist in an arbitrary space. In a two-dimensional smooth affine space, orthogonal systems can always be introduced at least in a sufficiently small neighbourhood of every point. It is sometimes possible to introduce orthogonal coordinate systems in the ...

The 51 Pegasi planetary system is quite different from our solar system. But the 70 Virginis and 47 Ursae Majoris systems appear to be more “normal”. With several known planetary systems it is now possible to make more general statements and to better test theories of planetary formation.

What is the relationship between systems thinking and lean? That's a fascinating question, one not so easily answered, because we're talking about two very different approaches, one a philosophy as well as a set of tools, the other, a practice. In its broadest sense, systems thinking is a framework that takes into account the interconnected [...]
