Abstract. Knowledge of clinically and cost-effective wound management is an obvious requirement for surgeons, yet wound care education rarely features within the medical curriculum. As a result surgical trainees are often poorly placed to join in multidisciplinary wound management and may feel threatened when asked to manage wound complications. A vast range of dressing products exists yet robust evidence of the function and effectiveness of individual products is often lacking.

Wound dressings: principles and practice - ScienceDirect

TNPT has been found to improve wound healing; to stabilize the wound and assist wound contracture, to stimulate angiogenesis and to remove wound exudate and decrease peri-wound oedema. In its simplest form localized negative pressure is applied to a closed foam or gauze-based wound dressing fitted to a cavity wound sealed under a film dressing.
